

To use the hacks listed below:

1. Edit the `user_wlan.sh` to fit your settings
2. Click the box “Prepare `user_wlan.sh`”
3. Double-click with the stylus into a box.
4. Make the screen update itself. (For example, enable/disable the onscreen keyboard)
5. Click “OK” in the window. If there’s no window, retry.

Start wired networking

Start wireless networking

Prepare `user_wlan.sh`
