

search your calibre library. `content_server_will_display` is a list of custom fields to be displayed. `content_server_wont_display` is a list of custom fields not to be displayed. `wont_display` has priority over `will_display`. The special value '*' means all custom fields. The value [] means no entries. Defaults:

```
content_server_will_display = ['*']  
content_server_wont_display = []
```

Examples:

To display only the custom fields #mytags and #genre:

```
content_server_will_display = ['#mytags', '#genre']  
content_server_wont_display = []
```

Edit tweak

Set custom metadata fields that the Content server will or will not display.

```
content_server_will_display = [u'#comments', u'#source']
```

```
content_server_wont_display = []
```
