Enhanced iPDF (version 20070523)
by *jharker* and *rincewind*

Features:

- *Power Saving (CPU Frequency Scaling)*
  The processor speed is changed to conserve power.
  It runs at 100 MHz when idle, 200 MHz when scribbling,
  and 400 MHz for page turning.

- *Fullscreen Mode*
  Fullscreen mode is now implemented.
  New documents open by default in fullscreen mode.
  The tool panels are hidden and the entire screen is used for
  display.

- *Quick Erase*
  To erase scribbles, simply scribble over things you want to
  erase, and continue to hold the pen down for a second
  after you stop. When you lift the pen, your scribble will be
  erased along with any other scribbles you crossed.

- *Remember Pen Settings*
  Current pen settings are saved with the file and loaded
  when it's re-opened.

- *Remember Fullscreen Settings*
  Current fullscreen/toolbar settings are saved with the file
  and loaded when it's re-opened.

- *Default Select Scribble*
  When a file is first opened, scribble is selected
  automatically by default.

Button Functions:

- *Up Arrow (short press): Toggle Erase*
  Toggles erase on/off.
  Somewhat obsolete with the new Quick Erase feature.

- *Up Arrow (long press): Toggle Fullscreen*
  Toggle fullscreen mode on/off.
  Currently fullscreen mode does not automatically change
  the zoom setting, it merely reveals more of the page.

- *Dot (short press): Show/Hide Scribbles*
  Toggle whether scribbles are visible.
  Very useful for temporarily hiding scribbles you don't
  want to see.

- *Dot (long press): Show/Hide Toolbar*
  In fullscreen mode, this toggles whether the toolbar is
  visible.
  Useful for bringing up the toolbar to use
  zoom/pan/rotate/check your page.

- *Down Arrow (long press): Manual Refresh*
  Manually refresh the screen, good for removing ghosting
  and other artifacts.
