

Their chief, Massasoit, was dead. His son Wamsutta had been killed by Englishmen, and Wamsutta's brother Metacom (later to be called King Philip by the English) became chief. The English found their excuse, a murder which they attributed to Metacom, and they began a war of conquest against the Wampanoags, a war to take their land. They were clearly the aggressors, but claimed they attacked for preventive purposes. As Roger Williams, more friendly to the Indians than most, put it: "All men of conscience or prudence ply to windward, to maintain their wars to be defensive."

Jennings says the elite of the Puritans wanted the war; the ordinary white Englishman did not want it and often refused to fight. The Indians certainly did not want war, but they matched atrocity with atrocity. When it was over, in 1676, the English had won, but their resources were drained; they had lost six hundred men. Three thousand Indians were dead, including Metacom himself. Yet the Indian raids did not stop.

For a while, the English tried softer tactics. But ultimately, it was back to annihilation. The Indian population of 10 million that was in North America when Columbus came would ultimately be reduced to less than a million. Huge numbers of Indians would die from diseases introduced by the whites. A Dutch traveler in New Netherland wrote in 1656 that "the Indians . . . affirm, that before the arrival of the Christians, and before the smallpox broke out amongst them, they were ten times as numerous as they now are, and that their population had been melted down by this disease, whereof nine-tenths of them have died." When the English first settled Martha's Vineyard in 1642, the Wampanoags there numbered perhaps three thousand. There were no wars on that island, but by 1764, only 313 Indians were left there. Similarly, Block Island Indians numbered perhaps 1,200 to 1,500 in 1662, and by 1774 were reduced to fifty-one.

Behind the English invasion of North America, behind their massacre of Indians, their deception, their brutality, was that special powerful drive born in civilizations based on private property. It was a morally ambiguous drive; the need for space, for land, was a real human need. But in conditions of scarcity, in a barbarous epoch of history ruled by competition, this human need was transformed into the murder of whole peoples. Roger Williams said it was

a depraved appetite after the great vanities, dreams and shadows of this vanishing life, great portions of land, land in this wilderness, as if men were

in as great necessity and danger for want of great portions of land, as poor, hungry, thirsty seamen have, after a sick and stormy, a long and starving passage. This is one of the gods of New England, which the living and most high Eternal will destroy and famish.

Was all this bloodshed and deceit—from Columbus to Cortés, Pizarro, the Puritans—a necessity for the human race to progress from savagery to civilization? Was Morison right in burying the story of genocide inside a more important story of human progress? Perhaps a persuasive argument can be made—as it was made by Stalin when he killed peasants for industrial progress in the Soviet Union, as it was made by Churchill explaining the bombings of Dresden and Hamburg, and Truman explaining Hiroshima. But how can the judgment be made if the benefits and losses cannot be balanced because the losses are either unmentioned or mentioned quickly?

That quick disposal might be acceptable (“Unfortunate, yes, but it had to be done”) to the middle and upper classes of the conquering and “advanced” countries. But is it acceptable to the poor of Asia, Africa, Latin America, or to the prisoners in Soviet labor camps, or the blacks in urban ghettos, or the Indians on reservations—to the victims of that progress which benefits a privileged minority in the world? Was it acceptable (or just inescapable?) to the miners and railroaders of America, the factory hands, the men and women who died by the hundreds of thousands from accidents or sickness, where they worked or where they lived—casualties of progress? And even the privileged minority—must it not reconsider, with that practicality which even privilege cannot abolish, the value of its privileges, when they become threatened by the anger of the sacrificed, whether in organized rebellion, unorganized riot, or simply those brutal individual acts of desperation labeled crimes by law and the state?

If there *are* necessary sacrifices to be made for human progress, is it not essential to hold to the principle that those to be sacrificed must make the decision themselves? We can all decide to give up something of ours, but do we have the right to throw into the pyre the children of others, or even our own children, for a progress which is not nearly as clear or present as sickness or health, life or death?

What did people in Spain get out of all that death and brutality visited on the Indians of the Americas? For a brief period in history, there was the glory of a Spanish Empire in the Western Hemisphere. As Hans Koning sums it up in his book *Columbus: His Enterprise*:

For all the gold and silver stolen and shipped to Spain did not make the Spanish people richer. It gave their kings an edge in the balance of power for a time, a chance to hire more mercenary soldiers for their wars. They ended up losing those wars anyway, and all that was left was a deadly inflation, a starving population, the rich richer, the poor poorer, and a ruined peasant class.

Beyond all that, how certain are we that what was destroyed was inferior? Who were these people who came out on the beach and swam to bring presents to Columbus and his crew, who watched Cortés and Pizarro ride through their countryside, who peered out of the forests at the first white settlers of Virginia and Massachusetts?

Columbus called them Indians, because he miscalculated the size of the earth. In this book we too call them Indians, with some reluctance, because it happens too often that people are saddled with names given them by their conquerors.

And yet, there is some reason to call them Indians, because they did come, perhaps 25,000 years ago, from Asia, across the land bridge of the Bering Straits (later to disappear under water) to Alaska. Then they moved southward, seeking warmth and land, in a trek lasting thousands of years that took them into North America, then Central and South America. In Nicaragua, Brazil, and Ecuador their petrified footprints can still be seen, along with the print of bison, who disappeared about five thousand years ago, so they must have reached South America at least that far back.

Widely dispersed over the great land mass of the Americas, they numbered 15 or 20 million people by the time Columbus came, perhaps 5 million in North America. Responding to the different environments of soil and climate, they developed hundreds of different tribal cultures, perhaps two thousand different languages. They perfected the art of agriculture, and figured out how to grow maize (corn), which cannot grow by itself and must be planted, cultivated, fertilized, harvested, husked, shelled. They ingeniously developed a variety of other vegetables and fruits, as well as peanuts and chocolate and tobacco and rubber.

On their own, the Indians were engaged in the great agricultural revolution that other peoples in Asia, Europe, Africa were going through about the same time.

While many of the tribes remained nomadic hunters and food gatherers in wandering, egalitarian communes, others began to live in more settled communities where there was more food, larger populations,
