

PocketBook Pro 902 Description

If this model of PocketBook seems the best choice for you, you, most probably, were choosing between this one and Pro 602. These two models are really identical in everything, except one most visible thing: their screen sizes differ for 3 inches. If you can't but indulge yourself in a luxury of a large screen, Pro 902 is your choice. Almost 10 inches that will be at your disposal, will please your eyes and your taste to the most comfortable reading.

E-Ink screen

This technology simulates the appearance of ink on paper and makes reading with PocketBook Pro 902 much like reading a paper book. The screen supports 16 shades of gray in reflecting light to display texts and illustrations.

Eyesight safety

E-Ink screen technology decreases potential eyestrain as it provides more stable images than flickering, conventional, flat panel displays.

Greater eye comfort

PocketBook Pro 902 offers a wide viewing angle and because the screen does not use back-light, the e-reader can be used in bright sunlight without images appearing to fade. As a set-up option, refresh without darkening the screen.

One charge performance

A single battery charge provides PocketBook Pro 902 with enough power to read 20 standard books, about 14,000 page turns, or two hours of daily reading during a month without recharging.
